

# MAGISK INSTALLATION

## Installation :

- Uninstall previous Magisk installation (if any) using 'Latest Magisk Uninstaller' (Link provided below)
- Install Magisk v17.0 using TWRP.
- Install Magisk v6.1.0apk.
- Update Magisk till latest Magisk zip release and Magisk Manager apk release.

## SafetyNet issues :

- Main issues related to failing Safety Net check in Mi4i is due to mismatch fingerprint and hence unable to access Google Play Store contents will full benefits.
- Best way to fix this is to edit fingerprint of 'build.prop' file and we are good to go.

## Steps to pass ctsIntegrity check :

- Either download / or copy the value from original 'build.prop' obtained from stock MIUI rom
- Edit / Replace the following code snippet

```
ro.build.fingerprint=Xiaomi/ferrari/ferrari:5.0.2/LRX22G/V6.4.10.0.LXIMICB:user/release-keys
```

- Also replace every search term 'keys' to 'release-keys'.

```
ro.build.id=Xiaomi/test-keys  
TO  
ro.build.id=Xiaomi/release-keys
```

Ex.

- Reboot

**Hint:** If everything fails,download 'MagiskHide Props Config' and follow the link  
<https://www.xda-developers.com/pass-safetynet-beta-android-pie-oneplus-6/>
